

The Benefits of using VIZOR's IT Asset Management Module

1. Securing Your Assets

Knowing exactly who has what assets is the first step to protecting your assets. VIZOR gives IT full visibility into the circulation of assets and holds employees accountable for the equipment they are using. Especially if an employee leaves, knowing the devices they were using is crucial to secure company assets and the company's intellectual property.

2. Track IT Asset Lifecycle!

From employee requests, approvals, procurement, to allocation and eventual retirement, track the lifecycle of assets in VIZOR. This allows IT departments to maintain efficient operations, always have insight into asset inventory, prepare for budgeting and comply with any regulations.

3. Stay Proactive

VIZOR is a proactive solution, sending IT departments alerts when assets are lost, nearing end of life, approaching the expiration of a warranty and so much more. IT doesn't have to worry about missing any information.

4. Follow Best Practices

VIZOR is ITIL certified for Asset Management, ensuring your organization is following best practices. Plus, VIZOR's streamlined and automated processes helps your organization maintain a competitive edge.

5. Centralize Information

Centralize purchase documentation, warranties and contracts related to IT assets in VIZOR. Upload documents in VIZOR or link to documents in your SharePoint. Further, integrate with external purchasing systems, such as Microsoft Dynamics, used by the procurement or accounting departments to keep IT information in one central and secure location.

6. Quicker ROI

VIZOR's features have been compared to high-quality tools like BMC Remedy and HP. However, customers choose VIZOR because of our affordable pricing. Our solution is up to 40% less than competitors, allowing our customers to reach their return on investments much faster.
