

Enhance your Microsoft Endpoint Configuration Manager

VIZOR leverages and complements your existing Microsoft Endpoint Configuration Manager (formally SCCM) infrastructure to reduce IT costs by optimizing the administration of IT assets. VIZOR's powerful web-based interface frees data previously siloed in ConfigMgr so all required organization parties can participate in the complete IT asset life cycle from employee request, through approval, procurement and provisioning.

VIZOR's software inventory normalization functionality transforms raw inventory data collected by ConfigMgr into usable information for license and software asset management. Normalized data is then reconciled against entitlements to form your effective license position supporting complex licensing compliance schemes such as per CPU and per core. Enhance your Microsoft System

	ConfigMgr	+ VIZOR
PC, Mac, UNIX/Linux management	✓	✓
iOS & Android device management (hybrid ConfigMgr and In-tune configuration)	✓	✓
Hardware & software inventory	✓	✓
Application delivery	✓	✓
Operating system deployment	✓	✓
Virtual desktop management	✓	✓
